1. Overview

DevoTranscribe is a professional speech transcription service that converts audio and video files into accurate text transcriptions. The service is powered by Google Cloud AI and features:

- **Fast Upload** - Upload audio and video files up to 5GB with progress tracking
- **AI-Powered Transcription** - High-quality speech transcription using Google Cloud Speech-to-Text
- **Speaker Identification** - AI-powered speaker detection for Dutch conversations using Gemini LLM
- **Refined Transcripts** - Light LLM cleanup for improved readability

Homepage overview

---

2. Getting Started

When you open DevoTranscribe, you will see the main page with:

- A **header** displaying the DevoTranscribe logo and “Powered by Google Cloud” branding
- The **hero section** with the title and a brief description
- The **Transcription Configuration** panel
- The **file upload** area
- **How it works** and **Coming Soon** feature cards

Homepage top section

Supported File Formats

Type	Formats
Audio	MP3, WAV, M4A, FLAC, OGG, WEBM
Video	MP4, MOV, AVI, MKV, WEBM

Maximum file size: 5GB. Files over 100MB automatically use direct-to-cloud upload for reliable transfer.

---

3. Transcription Configuration

Before uploading a file, configure the transcription settings in the **Transcription Configuration** panel. These settings are applied automatically once the upload completes.

Transcription Configuration panel

Available Options

Setting	Default	Description
Gemini speaker identification	Always on	Uses LLM-based analysis to keep speaker labels consistent throughout the full transcript. This is a core feature and is always enabled.
Automatic punctuation	Enabled	Adds punctuation and casing automatically to the transcribed text.
LLM speaker identification	Enabled	Uses Google Gemini to detect speaker changes automatically within the audio.
Extract audio	Disabled (auto-enabled for video)	Extracts audio from video files before transcribing. Automatically enabled when you upload a video file.

> **Note:** Configuration options are disabled (greyed out) while a file is uploading or a transcription is in progress. Adjust settings before starting an upload.

---

4. Uploading a File

To upload a file, use the upload area below the configuration panel.

Upload area

How to Upload

There are two ways to upload a file:

1. **Drag and drop** - Drag your audio or video file directly onto the upload area
2. **Browse** - Click anywhere on the upload area or click “browse” to open a file picker dialog

Once a file is selected, the upload begins immediately and the transcription will start automatically after the upload completes.

> **Tip:** If you upload a video file (e.g., MP4), the “Extract audio” option is automatically enabled to convert the video to audio before transcription.

---

5. Upload Progress

After selecting a file, a progress bar shows the upload status in real time.

Upload progress

The upload progress card displays:

- **File name** being uploaded
- **Progress bar** with percentage
- **Upload speed** (e.g., 702 KB/s)
- **Estimated time remaining** (e.g., ~2m 20s remaining)
- **Bytes transferred** (e.g., 59 MB of 155 MB)

Upload progress detail

> **Note:** Large files (over 100MB) use resumable upload technology, ensuring reliable transfers even on slower connections.

---

6. Transcription Processing

Once the upload completes, the transcription begins automatically. The progress bar updates to show the current processing stage:

- **Preparing transcription...** - Initial setup
- **Extracting audio from video...** - Converting video to audio (if applicable)
- **Processing file...** - Preparing the audio for transcription
- **Transcribing speech...** - AI is converting speech to text
- **Identifying speakers...** - Gemini is analyzing speaker patterns

An estimated remaining time is displayed during processing.

When completed, a green success bar appears with a celebration emoji:

Transcription completed

---

7. Viewing Results

After the transcription completes, the results page displays several sections:

Full results view

Result Header

The header shows:

- **"Transcription Complete"** title
- **Completion time** (e.g., "Completed in 1m 9s")
- **Word count** (e.g., "368 words")
- **Original / Refined** toggle to switch between transcript versions
- **Copy** and **Download** buttons

Original vs. Refined Transcript

DevoTranscribe provides two versions of the transcript:

- **Original** - The raw transcript returned by the Google Cloud Speech API
- **Refined** - A cleaned-up version with light LLM processing for improved readability

Use the **Original** / **Refined** toggle buttons in the header to switch between views. The refined view is selected by default when available.

---

8. Transcript Segments

The results include a **Transcript Segments** table showing the transcription broken into time-based segments:

Column	Description
Time	Start and end timestamp of the segment (e.g., `00:04.0 – 00:29.0`)
Confidence	AI confidence score from 0 to 1 (e.g., `0.82`)
Text	The transcribed text for that segment

The segments table is scrollable for longer transcriptions.

Below the segments table, the full transcript text is displayed in a grey box. If the transcript is long, it shows a preview with a **"Show more"** button to expand the full text.

---

9. Speaker Identification

When speaker identification is enabled, a blue **Speaker Identification** panel appears below the transcript.

Speaker Identification

This panel shows:

- **Speakers Detected** - Number of unique speakers found (e.g., 2)
- **Confidence** - Overall confidence level (high / medium / low)
- **Speakers** - List of identified speakers (e.g., “Spreker B, Spreker C”)
- **Note** - Additional context about speaker transitions and patterns

Speaker Transcript Actions

Two dedicated buttons are provided for the speaker-identified transcript:

- **Copy speaker transcript** - Copies the speaker-labeled transcript to your clipboard
- **Download speaker transcript** - Downloads a `.txt` file with speaker labels

---

10. Downloading and Copying Transcripts

Copy to Clipboard

Click the **Copy** button in the result header to copy the currently displayed transcript (Original or Refined) to your clipboard. A green “Copied” confirmation appears briefly.

Download as Text File

Click the **Download** button to save the transcript as a `.txt` file. The filename follows the format:

- `transcript-<job-id>.txt` (original)
- `transcript-<job-id>-refined.txt` (refined)
- `transcript-<job-id>-speakers.txt` (speaker-identified)

Job Metadata

At the bottom of the results, job metadata is displayed for reference:

Job metadata

- **Job ID** - Unique identifier for the transcription job
- **Created** - Timestamp when the job was created
- **Completed** - Timestamp when the job finished
- **Language** - The transcription language (Dutch / nl-NL)

> **Tip:** Save the Job ID when contacting support about a specific transcription.

---

11. Starting a New Transcription

After viewing results, you can start a new transcription in two ways:

- **"Transcribe Another File"** button - Located at the bottom of the results card
- **"Upload Another File"** button - Located below the results section

Both buttons reset the page to the initial state, clearing all previous results and resetting configuration options to defaults.

---

12. Support & Legal Pages

The footer at the bottom of every page provides links to three additional pages:

Privacy Policy

Privacy Policy

The Privacy Policy explains how DevoTranscribe collects, uses, and protects your information. Key points:

- Files are stored securely in Google Cloud Storage
- Content is processed solely for transcription purposes
- No data is sold or shared with third parties
- You can request data deletion at any time

Terms of Service

Terms of Service

The Terms of Service cover:

- Acceptable use of the service
- Service availability expectations
- Intellectual property (you retain ownership of your content)
- Limitation of liability

Support

Support page

For questions about uploads, transcripts, or any issues, contact support via email:

Email: joshua.vink@devoteam.com

> **Tip:** Include your **Job ID** or **filename** when contacting support to help resolve issues quickly.

---

13. Troubleshooting

Common Issues

Problem	Solution
File upload fails	Ensure your file is a supported format and under 5GB. Try again on a stable internet connection.
Transcription takes too long	Larger files take longer to process. Video files require audio extraction first, which adds time.
Poor transcription quality	Ensure the audio has clear speech and minimal background noise. The service is optimized for Dutch (nl-NL).
Speaker identification seems inaccurate	Speaker identification works best with clearly distinct voices and minimal overlap. Adjust the speaker count settings if needed.
Configuration options are greyed out	Options are disabled during active uploads or transcriptions. Wait for the current job to complete.
Page refreshed during transcription	DevoTranscribe saves pending transcription state. If a session is interrupted, the app attempts to recover the job status.

Browser Requirements

DevoTranscribe works best with modern browsers:

- Google Chrome (recommended)
- Mozilla Firefox
- Microsoft Edge
- Safari
